

**Amendments to the Claims:**

This listing of claims will replace all prior versions and listings of claims in the Specification.

**Listing of Claims:**

1-20. (Canceled)

21. (Currently amended) A method for delivering content playback related information between devices on a local network, the method comprising:

~~obtaining, when a particular operation for content being played is requested,~~  
state information from at least two services involved in the playback of the content, the  
state information comprising information related to data transport control of the content  
and information related to rendering states in which data of the content is rendered;

invoking an action to a device to store the state information in the device,  
wherein the state information is included in the action as an input argument; and

storing the state information in the device according to the action.

22. (Canceled)

23. (Currently amended) The method of claim 21, wherein the at least two services each comprises each of:

an AV\_Transport service; and

a Rendering Control service.

24. (Currently amended) The method of claim 21, wherein the information related to data transport control of the content ~~stored state information~~ includes ~~information used as control information to be used~~ for late playback of ~~[[a]]~~the content from a position where playback of the content is stopped.

25. (Previously presented) The method of claim 21, wherein the device includes the at least two services.

26. (Currently amended) A system for delivering content playback related information, the system embedded in a local network, the system comprising:

a server for storing content;

a device including at least one service; and

a control point for controlling the server and the device, wherein the control point:

~~obtains, when a particular operation for content being played is requested,~~ state information from at least two services involved in the playback of the content, the at least two services comprising the at least one service, ~~[[and]]~~ the state information comprising information related to data transport control of the content and information related to rendering states in which content data is rendered; and

invokes an action to the server to store the state information in the server, wherein the state information is included in the action as an input argument.

27. (Previously presented) The system of claim 26, wherein the server stores the state information according the action.

28. (Canceled)

29. (Currently amended) The system of claim 26, wherein the at least two services each comprise at least both of:

an AV\_Transport service: and

a Rendering Control service.

30. (Currently amended) The system of claim 29, wherein the server includes the AV\_Transport service and the device includes the Rendering Control service.

31. (Currently amended) The system of claim 29, wherein the device includes both the AV\_Transport service and the Rendering Control service.

32. (Currently amended) The system of claim 27, wherein the information stored in the server, related to data transport control of the content state information ~~stored in the server includes information used as control information~~ to be used for late playback of the content from a position where playback of the content is stopped.

33. (Previously presented) The system of claim 27, further comprising a second control point for reading the state information stored in the server and setting the read state information to a second device.

34-38. (Canceled)

39. (New) The method of claim 21, wherein the information related to the rendering states in which data of the content is rendered includes a value about volume.

40. (New) The system of claim 27, wherein the information, stored in the server, related to the rendering states in which data of the content is rendered includes a value about volume.

41. (New) The method of claim 21, wherein a first of the at least two services provides data transport control information and a second of the at least two services provides rendering state information, the state information comprising the data transport control information related to the data transport control of the content and the rendering state information related to the rendering states in which the data of the content is rendered.

42. (New) The system of claim 26, wherein a first of the at least two services provides data transport control information and a second of the at least two services provides rendering state information, the state information comprising the data transport control information related to the data transport control of the content and the rendering state information related to the rendering states in which the data of the content is rendered.
